

PROMOTES ORAL HEALTH – RICH IN ORGANIC MINERALS
LONG LASTING – WILL NOT SPLINTER

“ANTLER CHEWZ” ARE NOT IRRADIATED

*No deer are ever harmed to make an AntlerChewz™ product
Antlers are collected from deer that have been naturally shed.*

Full of calcium and phosphorus, they come from naturally shed deer antler. Wild deer shed their antlers once a year as part of a natural process, after which the deer re-grow another set. They don't contain any plastics, petrochemicals, empty starches or artificial flavors. Our antler chews are not bleached, dyed or irradiated. Better still, AntlerChewz™ don't splinter. Some bones, like chicken bones, splinter easily. These small pieces of bone can get stuck in your dog's throat and become a threat to his/her health.

Deer Antler Mineral Analysis; Approximate percentage or PPM (parts per million) – IRON 32-42 PPM – PHOSPHORUS 9-11% - SULFUR 0.21%-0.25% - CALCIUM 22%-24% - MAGNESIUM 10.5% - POTASSIUM 970-980 PPM – ZINC 62-65 PPM
