

## DogGestive Daily

DogGestive Daily is a digestive supplement composed of nature's super nutritious pumpkin, oat fiber and psyllium. This healthy premium blend of highly soluble and insoluble fiber has been shown to aid digestion, promote weight loss and support growth of friendly, healthy gastrointestinal micro flora.

Experts agree that fiber is key to a dog's digestive health. If you notice your dog is having trouble eliminating waste there's a good chance it's not a stomach problem or indigestion, but rather poor fiber in your pooch's diet!

Fiber increases the speed with which food waste products are eliminated from the body, thus reducing the body's exposure to free radicals and other toxins. Soluble fiber acts like a sponge and binds to bile salts and other waste products carried out in the stool thus preventing their absorption into the blood stream.

These fibers also are beneficial in promoting a soft, moist stool which aids eliminations. Commercially available pet foods provide as little as 5gms of fiber per 40 lbs of body weight when fed as recommended.

Soluble fiber also keeps food in the stomach longer which slows down the absorption of carbohydrates after eating, leading to the stabilization of blood sugar. Additionally, fiber can help with weight loss in overweight canines. Fiber gives a dog a feeling of being full, without the calories. Soluble fiber absorbs and holds a significant amount of water which reduces the amount an animal eats at each meal.

### INGREDIENTS:

**Pumpkin:** Not just a health food for us – for our pets too! Pumpkin is loaded with vitamins which are good for dogs, but it's the fiber content that's useful in the maintenance of a dog's digestive system. The additional fiber in Pumpkin helps with both diarrhea and constipation in pets. Best of all, most dogs enjoy the taste of pumpkin! Pumpkin contains antioxidant vitamins which are important for overall health. Vitamin A - essential for the immune system, skin and coat, as well as the lining of the digestive and respiratory tracts - is found in pumpkin puree. Pumpkin puree also contains significant amounts of Vitamin C, Calcium and Iron.

**Oat Fiber:** For years we've known that oat fiber benefits humans, but the same benefits help dogs too. Oat fiber helps the digestive system by "calming" the intestinal tract. It's also high in vitamins, minerals and protein and can help lower cholesterol levels in dogs.

**Psyllium:** This plant, native to Iran and India, has recently been found to contain high amounts of soluble fiber. Fiber is known to be a stool "normalizer" and can be the solution to many digestive problems in dogs.
