WESTERN RED CEDAR

HOUSES & FEEDERS

Distributors of Specialty Garden Products

Stovall is a manufacturer extremely high quality wood feeders and wild bird houses in Michigan. Stovall Products are made from all western red cedar. Constructed and assembled with stainless steel and dichromate plated screws, washers, hooks and chains. Products are hand sanded and many products are coated with wood protector, which accents the wood grain and the natural warmth of cedar. In houses calling for shavings use only white pine. Cedar shavings will kill the small fledgling birds.

ULTIMATE WESTERN/MOUNTAIN BLUEBIRD HOUSE

The Ultimate Western Mountain Bluebird House has both vertical sides open like doors. The right side has a clear plastic window inside the wood door, so you can peek into see the nest without disturbing the inhabitants. The left door easily opens for seasonal cleaning, a single pin can be twisted to unlock and swing the door open. To lock, simple twist the pin. Providing a nest box in your backyard will bring you seasons of enjoyment as you watch these beautiful birds raise their young. This house should be placed 3 to 6 feet above the ground, facing an open field or lawn with scatter trees.

10 ¼" wide x 7 ½" deep x 10.1/4" high – Model 2HUV
SV00270

WESTERN/MOUNTAIN BLUEBIRD HOUSE – RUSTIC

Western/Mountain Bluebird House Rustic accommodates the western and mountain bluebirds and has an entrance of 1.9/16 inches. It has a hinged roof for monitoring, side cleaning. This house should be placed 3 to 6 feet above the ground, facing an open field or lawn with scatter trees.

WESTERN RED CEDAR HOUSES & FEEDERS

Large Chickadee & Wren House – Post Mount

A large house designed to be mounted to a post or tree. This house will attract house wrens, black-capped chickadees, tufted titmice and white-breasted nuthatches. Entrance hole is 1 ¼" to deter house sparrows. For chickadees mount 5 to 15 feet high and for Wrens mount 5 to 10 feet high.

8 ¼" wide x 4 ¾" deep x 14 ½" high

Model 1H

SV00240

Country Squire Arch Roof House

The Country Squire Arch Roof House features a predator guard and a 1 ½" universal entrance hole. This house can be used by Wrens, Black-capped Chickadees, Tufted Titmice, White-breasted Nuthatches, Bluebirds, Violet Green Swallows and Tree Swallows. It also has grooves in the wood below the entrance for young birds learning to exit. House should be mounted 5 to 15 feet in height.

8" wide x 5 ¼" deep x 13 ¾" high

Model CS3

SV00239

Woodpecker House

The Woodpecker House is designed with a 2" entrance hole. The house is filled with wood shavings so the woodpecker thinks he is excavating a hole. The roof hinges to clean in the early spring and refill with white pine wood shavings for the next nesting season.

This house attracts Downy Woodpeckers. The Woodpecker House is most often used as a post mounted bird house.

10 ½" wide x 6 ¼" deep x 22" high

Model 4HF

WESTERN RED CEDAR HOUSES & FEEDERS

Flicker House

This Rustic Northern Flicker House is filled with wood shavings and has a 2 ½" entrance hole. This is a larger house for a larger bird. Northern Flickers will return each year to the same house and will defend a large area against other flickers. This house should be set on a pole or tree 8 to 20 feet above the ground. To prevent Starlings from nesting (starlings begin nesting 2 weeks prior to Flickers nesting), cover the hole with screen, then remove when the Flickers begin their nesting period. The Flicker House has a side opening for easy clean out. The roof hinges to refill with shavings next season.

12 ¾" wide x 8 ¾" deep x 22 ½" high

Model 4HF

SV00247

Screech Owl & Kestrel House

Screech Owls are small about 8" long and feed on insects that they catch in flight, larger ground insects, mice and other small mammals. They are most active at dawn and dusk. American Kestrels are the smallest of the falcon family, extremely beautiful and a joy to have around when grasshoppers and mice are a problem. Stovall's Screech Owl/Kestrel box has a 3" entrance hole and comes complete with wood shavings and placement instructions. It also features a special perch inside for owls to roost and look out. This house should be placed in an open area with no twigs or branches, 10 to 30 feet from ground level. 14 ½" wide x 4 ¾" deep x 21" high

Model 6H

SV00249

Robin's Nesting Shelf

Some species of birds prefer an open-front box. Song sparrows, catbirds, thrashers, phoebes, robins and barn swallows like to raise their families in a platform nest. Our Robin Nesting Shelf may be placed under the eaves, or on the side of a building. Place the shelf out in early spring before the leaves are on the trees for the Robin's protection from predators.

14 ½" wide x 4 ¾" deep x 21" high – Model 7H

WESTERN RED CEDAR HOUSES & FEEDERS

Single Cell Bat House

This Bat House holds 12 to 36 bats. Bat houses are often mounted back to back to create a nursery. The Bats will crawl to the warmest place in the Bat House. Do not place on live trees. Bats require sun the first thing in the morning. Never place a Bat house in a shady location. Never shake the box to make the bats fly, they will not return to the box. Check the box regularly for insect infestation and clean as needed.

14 ½" wide x 4 ¾" deep x 21" high

Model 8H

SV00252

Roosting House Rustic

A roost box provides secure shelter from predators, low temperatures and poor weather for multiple cavity-nesting birds. Depending on the bird species and size of the flock, a dozen birds or more may take advantage of a single roost box to share body heat through bad weather or cold winter nights, greatly improving their chances of surviving harsh weather and sudden freezes. Roost boxes should ideally be placed in a sheltered area protected from prevailing winds. If the house gets some sunlight during the day, particularly in the late afternoon, it will retain that heat for a time and be more attractive to birds. Facing the entrance hole south will also help the box get more heat. The ideal height for a roost box varies for different bird species, but the box should be mounted on a pole or tree trunk between 6-15 feet from the ground. If mounting the box on a pole, use baffles to deter predators. Stovall's Roosting House is made with a 2" entrance hole and removable clean out board with a hanger with screws on the inside of the house. It has two 15" roosting perches and screen on the back for woodpeckers to roost on. Multiple species will use it at the same time during harsh weather.

10 ½" wide x 16" deep x 11" high – Model 15H

Small Ground Feeder Tray With Perforated Floor

Attract birds and all manner of wildlife with this ground bird feeder tray. The tray's perforated plastic floor allows water to flow through it, preventing overflow problems. Tray can be removed to wash.

17 ¼" wide x 14 ¼" deep x 6" high

Model 14FH

SV00276

Large Ground Feeder Tray With Perforated Floor

This large ground feeder tray is much better than just putting a saucer of seed or throwing seed directly on the ground. The perforated plastic floor allows for water drainage allowing seed to dry in the sunlight. The floor is removable and washable. The larger feeding area will draw many types of ground feeding wild birds. Additionally this feeder can be placed under a hanging feeder to catch dropped seed. For shipping the legs will be turned sideways.

23" wide x 23" deep x 7 ¾" high

Model 6FP

SV00212

Cedar Cap for Square 4" x 4" Posts

You can attach this adapter to most wooden feeders, and then slide it over the top of a 4x4 post. To avoid cracking you should first pre-drill holes in the bottom of your feeder. Treated 4x4 posts may be a bit larger in dimension than non-treated lumber and may require trimming or shaving down for this adapter to fit properly. **Internal Dimensions: 3.5"x3.5"**
